Credit Card Processing ~ *a simple, efficient, cost-effective solution*

Are you tired of spending time processing credit card transactions manually and then having to update your database? Are you currently being charged banking and credit card fees, as well as monthly fees, even if you don't process anything? Or has your organization decided not to accept credit cards as it is too expensive to set up with the banks and too risky to handle your customers' confidential credit card information?

Not any more.

Metafile has partnered with IATS, a division of Ticketmaster, to bring you a simple and efficient way to process ALL your credit card transactions — directly from results*plus!* — without having to pay upfront or monthly fees!

How does the IATS service work?

IATS (International Automated Transactions Services) is a Ticketmaster company that provides credit card processing for nonprofit organizations throughout North America. With IATS, nonprofits can accept major credit cards without having to set up individual accounts with banks and credit card companies. And — just for nonprofits — there are no setup fees, monthly minimums, or annual fees. This special service from IATS includes:

- a special low fractional cost per transaction
- immediate verification of transactions
- web-based reports
- customer service support
- savings for nonprofits in both time and money
- the ability to accept the 5 major credit cards from your donors: *Visa, MasterCard, American Express, Discover, and Diners Club.*

How does results*plus!* process these credit card payments?

It's as simple as adding a gift to any results*plus!* batch:

1. You input your credit card transactions just like other gifts.
2. You send the gift(s)—per individual gift or per batch— directly to IATS with a single mouse click for immediate processing online.
3. Once the transactions are authorized, results*plus!* automatically updates the donor record, saving you valuable time and reducing the possibility of data entry errors.

To ensure security, credit card numbers are stored and displayed encrypted.

This easy and inexpensive way for nonprofits to process credit card donations has been custom-designed for you and your donors. The new functionality is built right into results*plus!* Version 9, at no additional charge from Metafile.
